LIVE LIFE WITHOUT VARICOSE VEINS

Common effects of untreated venous conditions include:

- LEG OR ANKLE SWELLING
- LEG HEAVINESS AND FATIGUE
- BURNING OR ITCHING SKIN
- RESTLESS LEGS
- SKIN CHANGES/ PIGMENTATION
- SKIN ULCERATION
(ULCERS/SORES/OPEN WOUNDS)

Varicose veins are NOT a cosmetic issue. Treatment is necessary for a complete recovery, and is usually covered by most insurance carriers. Visit our website to learn if we accept your insurance.

PROGRESSION & DIAGNOSIS

These factors may increase the risk of developing a venous condition:

- AGE (>40 YEARS)
- GENDER
- FAMILY HISTORY
- HEAVY LIFTING
- MULTIPLE PREGNANCIES
- OBESITY
- EXCESSIVE STANDING

Venous reflux occurs when valves in veins no longer function, and blood begins to travel in both directions, leading to the pooling of blood in the legs. Leg veins then begin to lose form and protrude under the skin as varicose veins.

Venous conditions are diagnosed by a non-invasive ultrasound that takes around 30 minutes. This is the gold-standard for diagnosing the site and severity of venous reflux.

LASER TREATMENTS FOR YOUR DREAM SKIN

Laser treatments we offer:

- FULL BODY LASER HAIR REMOVAL
- SPIDER VEIN REMOVAL
